CYCLON SEPARATOR

A funnel-shaped device for removing particles from air or other fluids by centrifugal means; used to remove dust from air or other fluids, steam from water, and water from steam, and in certain applications to separate particles into two or more size classes Cyclones are commonly considered the best pollution control option for many various manufacturing companies. The simplicity and low cost nature of cyclones make them widely used. They often need minimum maintenance. Cyclones have few pieces which mean if there ever is a problem you will only need to replace one or two items. They are known to effectively operate in any climate condition. This feature is extremely helpful for work areas melting materials at elevated temperatures or workshops in locations where humidity is often high. It can be quickly produced and shipped to any manufacturing company seeking pollution control. There are different types of cyclones. Each model has been specifically designed to address a particular air quality issue.
